

## Table of Contents

Lecture No	Contents	Page No
01	Introduction; Benefits of database approach; Data abstraction; Instances and schemas of database; Data models; People around DBMS; When DBMS is not useful; Database management software; Exercises	7
02	File-processing system; Database languages; DBMS architectures; Database system utilities; DBMS interfaces; Types of database systems; Exercises	14
03	Conceptual models and database design; Entities and attributes; Relationships; Entity relationship model; Entity relationship diagrams having weak entities; Some concepts; Exercises	18
04	Extended ER modeling; Subclasses, superclasses and inheritance; Specialization and generalization; Aggregation; Mapping of ERD into tables; Exercises	26
05	Relation; Nested relation; Relational model; Codd's rules; NULL value; Exercises	34
06	Relational algebra; Fundamental operations; Join operations; Other operations in relational algebra; Tuple relational calculus; Exercises	41
07	Introduction to SQL; History; Benefits of SQL; Database access; SQL versus high level language; SQL for business requirements; Initiatives by IBM; Initiatives by Microsoft; SQL integration with Java; Exercises	47
08	SQL elements; Procedural extensions to SQL; Introduction to MySQL; Advantages of MySQL; Some applications of MySQL; Some remarks; Disadvantages of MySQL; Exercises	51
09	Downloading MySQL Installer; Connecting to MySQL using shell; Connecting to MySQL server; Exercises	54
10	Activating MySQL Workbench; MySQL Workbench features; Some SQL statements; Example: CREATE DATABASE, USE DATABASE, CREATE TABLE, SELECT statements; Exercises	58
11	Data / attribute; Database schema; Key; Constraints; AND, OR, NOT operators in SQL; Exercises	64
12	SELECT DISTINCT statement; ALTER TABLE, CHECK on TABLE; BETWEEN, LIKE and IN operators; ORDER BY clause; NULL value; Exercises	68
13	LIMIT clause; MIN () and MAX () functions; COUNT (), AVG () and SUM () functions; % wildcard; Aliases; Exercises	72
14	Join, cross-product operations; Equijoin (inner join) operation; Outer join operations; Defining EmployeeDB; Exercises	75
15	Data entry; JOIN operations; Self join operation; GROUP BY, HAVING clauses; Exercises	78
16	EXISTS operator; Top k query; Nesting of queries; Comments; ALL operator; ANY operator; EXCEPT vs NOT IN; Exercises	82
17	SalesDB creation; delete statement; update statement; alter table; union operator; drop table; Exercises	86
18	CASE statement; UNIQUE constraint; Default constraint; AUTO INCREMENT field; DROP DATABASE; Exercises	92

## Table of Contents (Contd . . .)

Lecture No	Contents	Page No
19	CREATE VIEW statement; DROP VIEW statement; Stored procedures; Stored procedures with input parameters; Stored procedures with output parameters; Stored procedures with local variable; Exercises	95
20	Stored functions; Grant/revoke privileges; create index statement; Exercises	98
21	Select SQL queries; Exercises	101
22	Relational database design; Functional dependencies; Normalization; First normal form; Second normal form; Third normal form; BCNF normal form; Exercises	106
23	More on functional dependency; Finding closure of functional-dependency set; Finding closure of attribute set; Assertions; Triggers; Exercises	111
24	Canonical cover; Dependency preserving decomposition; Lossless decomposition; Algorithms of normalization; Exercises	118
25	Multivalued dependency; Fourth normal form; Exercises	124
26	View; Materialized view; Indexing; Integrity constraints; Exercises	129
27	Overview of query processing; Some strategies for query optimization; Query tree; Heuristic rules; Exercises	134
28	Database security; DBA privileges; Database auditing; Mandatory access control; SQL commands; Exercises	140
29	Physical storage media; Measures of disks; Improving speed of accessing blocks; Exercises	145
30	Flash memory; RAID; Magnetic tape; File organization; Variable-length records; Exercises	150
31	Heap file organization; Sequential file organization; Hash file organization; Multi-table clustering file organization; Data dictionary storage; Exercises	156
32	Database buffer; Indexing; Ordered indices; Dense and sparse Indices; Searching on multiple keys; Exercises	159
33	<i>m</i> -way search tree; B-tree; Exercises	163
34	B <sup>+</sup> tree; Exercises	168
35	Hashing; Static hashing; Bucket overflow; Dynamic hashing; Exercises	173
36	Transactions; Database operations; Atomicity and durability; Schedules; Exercises	178
37	Serializability of schedule; Conflict serializability; Exercises	184
38	Concurrency control; Lock-based protocols; Two-phase locking protocol; Exercises	189
39	Failures; Log-based recovery; Checkpoints; Shadow paging technique; Exercises	194
40	Centralized system architectures; Server system architectures; Network types; Exercises	199
	<b>Index of Keywords</b>	203
